

CHIP for PrestaShop - User Guide

Version 1.0.1 | Author: CHIPAsia | License: OSL 3.0

1. Introduction

CHIP for PrestaShop is a payment gateway module that lets you accept online payments via CHIP Collect. Supported payment methods include FPX, FPX B2B1, DuitNow QR, Card (Visa, Mastercard, Maestro), Atome, GrabPay, Maybank QRPay, ShopeePay, Touch 'n Go eWallet and Crypto Coin.

2. Requirements

- PrestaShop 1.7.0 to 9.1.4 (single module compatible across all versions)
- PHP 7.2 or newer (PHP 8.x supported)
- cURL extension (falls back to stream context when unavailable)
- OpenSSL extension (used for webhook signature verification)
- A CHIP merchant account with an active brand (Secret Key + Brand ID)

3. Installation

- Copy the chip folder into the PrestaShop modules directory so the module lives at modules/chip/chip.php (or upload the ZIP via Module Manager).
- In the Back Office, go to Modules > Module Manager, find CHIP and click Install.
- After installation, click Configure.

4. Configuration

Secret Key - Your CHIP brand secret key (never share it). Obtain it from the CHIP dashboard under Developers > Brands.

Brand ID - Your CHIP brand ID, also from Developers > Brands.

Payment Methods (optional) - Restrict which payment methods are offered at checkout. Leave empty to allow all methods supported by your brand.

Due Strict - When enabled, payment must be completed before the due time.

Purchase Timezone - Timezone used for the purchase (default Asia/Kuala_Lumpur).

After saving, click the **Test API** button to verify connectivity with CHIP.

5. Payment Flow

The customer selects Pay with CHIP at checkout. The module creates a purchase on the CHIP gateway and redirects the customer to the secure CHIP payment page. After payment, the customer is redirected back to the order confirmation page. The CHIP webhook verifies payment status and validates the order automatically.

6. Refunds

In the Back Office order page, a Refund via CHIP button is available for CHIP orders. It refunds the full paid amount through the CHIP gateway. Partial refunds can be processed from the CHIP dashboard.

7. Troubleshooting

- Payment not confirmed: check that the shop URL is reachable over HTTPS and that the CHIP webhook endpoints are not blocked by a firewall.
- Test API fails: verify the Secret Key and Brand ID are correct and active.
- For any issue, contact CHIP support with your order reference and purchase ID.

8. Support

For merchant support, contact CHIP at <https://www.chip-in.asia> or via the CHIP dashboard.
